

# One tap. Your people know where you are.

A free phone app for anyone who wants family, caregivers, or teammates to be able to find them fast.

-  **One tap sends an SOS to your whole group**  
Everyone in the group sees the alert and your live location on a map at the same time. You do not have to call people one at a time.
-  **Your emergency contacts get a text, app or no app**  
The text includes your location. It reaches the people on your list even if they never installed anything.
-  **Draw a safe zone around home, camp, or an event**  
Your group gets a notification when you arrive or leave it. Useful for a caregiver at work, or a team spread across a big site.
-  **Keep family and your response team in separate groups**  
Run up to ten groups and pause any one of them. Invite people by phone number or by sending a link.

## Get the app

Point your phone's camera at this square, then tap the link that appears on your screen.

**In an emergency, call 911 first.** BuddySOS is not a medical alert device. It does not detect strokes, falls, or any medical event, and it does not contact 911 for you. The safety features are free; an optional upgrade removes ads.
